DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hikosaka et al. (US 2004/0001975).

Hikosaka et al. disclose a magnetic recording medium for use with a magnetic recording head including a substrate, a soft magnetic layer, an underlayer and a perpendicular recording layer. The reference teaches that the underlayer is selected from a group of alloys which includes CoCrRu. The reference teaches that the perpendicular magnetic layer is selected from a group which includes CoPtCrO and CoPtCr-SiO₂ (see paragraphs 11, 23, 26, 30, 32, and 35).

It would have been obvious to one of ordinary skill in the art at the time of invention to choose either CoPtCrO or CoPtCr-SiO₂ from the group of disclosed magnetic layer alloys because each of the disclosed materials would be expected to function equivalently.

With respect to the limitation requiring that the perpendicular residual magnetization of the magnetic layer is greater than the in-plane residual magnetization of that layer, it is the Examiner's contention that the magnetic layer taught by Hikosaka et al. has a perpendicular orientation and therefore, necessary satisfies this limitation.

Art Unit: 1773

With respect to claim 8, Hikosaka et al. is silent with respect to the limitation requiring that the underlayer contains 1-65 at % of Co. However, it would have been obvious to one of ordinary skill in the art to adjust the amount of Co in the CoCrRu layer taught therein in order to obtain the desired level of magnetization.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lu et al. (US 2004/0072027) is cited as art of interest.
